

DETAILED WORK FLOW EXPLANATION

Promove Innovation Cloud (PIC)
Vol - 01

For Internal purpose only. Developers reference manual

OVERVIEW (UNDERSTANDING)

(Image is sourced from the Promove latest website and not cloud. Image showcases the offerings and core products/ services from Promove. Domain : Promovecyc.com)

CLOUD ACCESS FRAMEWORK AND CONTROLLED DEPLOYMENT STRATEGY

The ProMove Innovation Cloud is being introduced as a strategically controlled digital ecosystem during its initial year of deployment, with a clearly defined access framework designed to ensure quality testing, performance validation, and structured user onboarding.

Unlike conventional platforms that operate on open-access or direct subscription models, the ProMove Cloud has been intentionally positioned as a value-integrated extension of ProMove's core offerings, ensuring that access is granted only to verified and actively engaged users within the ecosystem.

For the first operational year, the platform shall function under a restricted access model, wherein entry into the cloud is exclusively linked to participation in ProMove's primary products and services. These include:

- Startup School
- Instant Internship
- Skill Development Programs
- III (Instant Incubation Installation – Institutional Model)

All individuals enrolling through these offerings shall be provided with complimentary access to the ProMove Innovation Cloud for a duration of **one (1) year**, thereby enabling them to experience, engage with, and contribute to the ecosystem without additional financial barriers.

A distinct structural approach is applied in the case of the III (B2B Institutional Model), wherein access to the cloud is provisioned at an institutional level. Under this model:

- Institutions (schools/colleges) procure the III product
- Students within the institution are granted free and direct access to the cloud
- Institutional heads and administrators are provided with dedicated administrative dashboards for monitoring, control, and operational oversight

This ensures a top-down onboarding mechanism, enabling large-scale user integration while maintaining centralized control and governance.

Furthermore, the ProMove Innovation Cloud shall operate under a controlled user capacity of approximately 2,000 users during its first year, encompassing both individual and institutional participants. This limitation is intentionally imposed to:

- Enable focused testing and refinement of platform functionalities
- Ensure system stability and performance under real-world conditions
- Facilitate iterative improvements based on user behavior and feedback

Access to the platform shall therefore be strictly regulated, with no provision for open or independent registration. All user entries must be authenticated, validated, and linked to an underlying ProMove offering, ensuring that the ecosystem remains secure, structured, and purpose-driven.

This controlled deployment strategy reflects ProMove's commitment to building not just a platform, but a high-integrity, scalable innovation infrastructure, where access, participation, and growth are systematically aligned with the organization's long-term vision.

{TWO KEYS APPROACH}

INNOVATION SCORE FRAMEWORK – PERFORMANCE-DRIVEN ECOSYSTEM ENGINE

At the core of the ProMove Innovation Cloud lies a **performance-centric evaluation and visibility system known as the Innovation Score Framework**, designed to fundamentally redefine how individuals are recognized, ranked, and rewarded within the innovation ecosystem.

Unlike conventional platforms that rely on static profiles, credentials, or self-declared achievements, ProMove introduces a **dynamic, outcome-based scoring mechanism**, where an individual's growth, effort, and execution are continuously quantified and reflected through a structured scoring model.

The **Innovation Score**, calibrated on a scale of **0 to 200 points**, serves as a **real-time indicator of an individual's innovation capability, execution strength, and market readiness**. This score is not artificially assigned but is progressively earned through consistent engagement, skill development, and tangible output within the ProMove ecosystem.

To enhance their Innovation Score, users—particularly **Student Innovators**—are required to actively participate in activities that demonstrate real-world value creation, including but not limited to:

- Continuous upskilling through ProMove Skill Development Programs

- Solving real-world problem statements sourced through the ecosystem
- Building and developing products from ideation to execution
- Demonstrating traction through measurable milestones such as:
 - Patent filings and intellectual property registrations
 - Awards and recognitions
 - Minimum Viable Products (MVPs)
 - Prototypes and working models
 - Market-ready or revenue-generating products

Each of these activities contributes incrementally to the Innovation Score, ensuring that the system rewards **effort, consistency, and execution rather than intent alone**.

The Innovation Score directly influences **profile visibility and ecosystem reach**, meaning that individuals with higher scores are more prominently positioned within the platform when viewed by:

- Investors seeking high-potential opportunities
- Recruiters identifying innovation-driven talent
- Mentors evaluating serious and committed innovators

This creates a **meritocratic discovery system**, where visibility is earned through performance rather than purchased through paid promotion or artificial boosts.

Importantly, the ProMove Innovation Cloud operates on a model where users **do not pay for access to the platform itself**. Instead, access is bundled with ProMove's core offerings, and users are incentivized to grow within the system by engaging with these products.

As a result, the ecosystem naturally aligns user behavior toward **continuous improvement, real-world execution, and outcome-driven growth**, enabling individuals to transition into:

- **Entrepreneurs**, by building and scaling their own ventures
- **Intrapreneurs**, by leveraging their innovation capabilities within organizations

The Innovation Score Framework, therefore, serves not only as a ranking mechanism but as a **behavioral engine**, driving users toward meaningful progress, measurable achievements, and long-term success within the innovation economy.

PENNY INVESTMENT FRAMEWORK – DEMOCRATIZING EARLY-STAGE FUNDING

Complementing the Innovation Score Framework is the **Penny Investment Model**, a groundbreaking approach designed to democratize access to early-stage funding while simultaneously expanding participation in the startup ecosystem.

Traditionally, investment opportunities have been limited to:

- High-net-worth individuals
- Venture capital firms
- Institutional investors

This has created a significant gap, where **innovators struggle to access early capital**, and aspiring investors remain excluded due to high entry barriers.

The ProMove Innovation Cloud addresses this gap by introducing a **low-entry, participation-driven investment framework**, where:

- Any individual with financial capacity and interest in innovation can register as an **Investor**
- There is no requirement to belong to a venture capital firm or institutional body
- Working professionals with savings and entrepreneurial intent can actively participate

Under this model, investments can begin from as low as **₹20,000**, enabling:

- Micro-investments into early-stage ideas
- Support for MVP development, prototyping, and initial company setup
- Faster execution for innovators who otherwise lack funding

In return, investors are provided with structured opportunities to engage in startups through:

- Equity participation (shares)
- Strategic roles such as **Director or Co-Founder (as applicable)**
- Long-term value appreciation based on startup growth

This creates a system where:

- Innovators gain **quick, accessible funding without complex processes**
- Investors gain **early access to high-potential opportunities** without large capital commitments

Unlike traditional funding routes such as grants or venture capital—which are often time-consuming, competitive, and heavily regulated—the Penny Investment Model offers:

- **Speed of execution**
- **Simplicity in participation**
- **Direct connection between talent and capital**

Additionally, this framework enables investors to:

- Explore and evaluate innovator portfolios within the platform
- Track growth and progress of invested ventures
- Experience value appreciation in a manner conceptually similar to early-stage equity growth

Importantly, this model allows both innovators and investors to participate **without disrupting their existing professional commitments**, enabling:

- Innovators to build while learning
- Investors to participate while working

The Penny Investment Framework thus transforms the ProMove Innovation Cloud into a live **marketplace of innovation** and opportunity, where:

- Capital meets capability
- Ideas meet execution
- And participation is no longer restricted by scale, status, or traditional barriers

Chapter -1 (technicality)

DASHBOARD MODULE: ECOSYSTEM LOGIN & ROLE-BASED ENTRY SYSTEM

1. OBJECTIVE OF THE MODULE

The Ecosystem Login & Signup Interface serves as the **primary entry gateway into the ProMove Innovation Cloud**, functioning beyond a conventional authentication system.

This module is designed to:

- Identify and classify users based on their role within the innovation ecosystem
- Control access to dashboards, features, and data based on role selection
- Establish predefined ecosystem relationships between different stakeholders
- Ensure that each user enters the platform with a **clearly defined purpose, pathway, and interaction scope**

The system shall act as a role-driven access controller, ensuring that the platform operates as a structured ecosystem rather than an open networking environment.

2. USER TYPES AND ROLE DEFINITIONS

The system shall support the following user roles:

- Student Innovator
- School (Institution – School Level)
- College (Institution – Higher Education Level)
- Mentor
- Investor
- Recruiter
- Admin

Each role shall be:

- Mapped to a specific dashboard
- Assigned predefined permissions
- Connected only to relevant ecosystem stakeholders

3. ROLE SELECTION AND ACCESS CONTROL MECHANISM

During login/signup, the user must:

- Enter registered email credentials
- Select their role explicitly from the available options

The system shall:

- Validate whether the user is eligible for the selected role
- Map the user to the corresponding dashboard
- Restrict access to only role-specific features and connections

Role selection shall be treated as:

- A critical system decision point
- Non-changeable without admin intervention (recommended)

4. ECOSYSTEM CONNECTION ENGINE (CORE LOGIC)

The platform shall enforce a predefined relationship mapping system, where each role is connected only to specific stakeholder categories.

4.1 Student Innovator Connections

- Mentor
- Investor
- Recruiter

Purpose:

- Product development guidance
- Funding opportunities
- Career/placement outcomes

4.2 School Connections

- Mentor
- Investor

Restriction:

- No connection with Recruiters

Rationale:

- Schools focus on innovation exposure, not placements

4.3 College Connections

- Mentor
- Investor
- Recruiter

Purpose:

- Incubation
- Funding
- Placement opportunities

4.4 Mentor Connections

- Student Innovators

Purpose:

- Guidance
- Product validation
- Innovation development

4.5 Investor Connections

- Student Innovators
- Schools
- Colleges

Purpose:

- Discover startups
- Fund innovation
- Institutional collaboration

4.6 Recruiter Connections

- Student Innovators
- Colleges

Restriction:

- No connection with Schools

Purpose:

- Talent sourcing
- Hiring and placement

5. SYSTEM BEHAVIOR AND BACKEND ENFORCEMENT

- The Developer shall ensure that:
- These connections are enforced at the backend level, not just visually
- Users cannot:
 1. Search or connect outside allowed roles
 2. Access irrelevant dashboards
 3. Interact with unauthorized stakeholder groups

The system must operate as:

- **Controlled ecosystem logic (NOT open marketplace)**

6. USER FLOW

- User enters email
- User selects role
- System validates access (based on ProMove purchase logic)
- User is redirected to role-specific dashboard
- System activates only relevant connections

7. ADMIN CONTROL

Admin shall have the ability to:

- Override role assignments
- Approve/reject user access

- Modify user-role mapping if required
- Monitor ecosystem interactions

8. CRITICAL DEVELOPMENT NOTES (STRICT)

- Role-based logic is **core system architecture — cannot be bypassed**
- No universal dashboard access
- No open networking features
- Every connection must be **intentional and restricted**
- Performance must support real-time interaction filtering

CONT.....

MODULE:

STUDENT INNOVATOR DASHBOARD & EXECUTION ECOSYSTEM

1. OBJECTIVE OF THE DASHBOARD

The Student Innovator Dashboard shall function as a centralized execution and growth engine, enabling users to:

- Track their innovation journey end-to-end
- Build, manage, and scale products
- Improve their Innovation Score through real actions
- Interact with the ecosystem (mentors, investors, recruiters)
- Transition into Entrepreneur or Intrapreneur pathways

The dashboard shall not be informational, but action-driven, ensuring that every activity contributes toward measurable outcomes.

2. CORE DASHBOARD COMPONENTS (HOME SCREEN)

2.1 Innovation Journey Tracker

- Visual step-based progress bar:
 - Idea → Problem → Build → Patent → Launch
- Each stage must:
 - Auto-update based on user activity
 - Reflect backend data (NOT manual toggling)

2.2 Innovation Score Engine

- Display as circular progress (out of 200)
- Must dynamically update based on:
 - Problems solved
 - Products built
 - Skill courses completed
 - Patents / IPR
 - MVP / Prototype / Market readiness
- Additional indicators:
 - Weekly growth (e.g., +5 this week)
 - Ranking percentile (Top % innovators)

MUST BE:

- Backend-calculated
- Tamper-proof
- Directly linked to visibility in ecosystem

2.3 Active Project Tracker

- Show current working project:
 - Name
 - Category
 - Progress %
 - Timeline
 - Next milestone
- Must sync with:
 - Product Workspace
 - Task completion
 -

2.4 Portfolio Section

- Display all projects:
 - Title
 - Category
 - Stage (Ideation / Patent / Prototype etc.)
 - Progress bar
- Must support:
 - Multiple projects simultaneously
 - Auto-update from workspace

2.5 Mentor Sessions

Display:

- Upcoming mentor sessions
- Mentor details

Future scope:

- Booking system (optional)

3. LEFT TOOLBAR MODULES (STRICT STRUCTURE)

3.1 Problem Bank (CRITICAL MODULE)

Objective:

Provide verified, real-world, patentable problem statements

Features:

- Search bar
- Category filters:
 - Agriculture, Tech, Healthcare, Education, etc.

Tags:

- Verified
- Difficulty level
- Domain

Actions:

- View Details
- Claim Problem

Backend Logic:

Once claimed:

- Problem gets assigned to user
- Reflects in Product Workspace

3.2 Idea Studio – TO BE REMOVED COMPLETELY

- No UI
- No backend reference

3.3 Product Development Workspace (CORE ENGINE)

Objective:

Provide a lightweight execution workspace, NOT heavy development tools.

Key Functionalities

A. File Upload (STRICT LIMITATION)

Only allow:

- PDF
- Images (pen-paper sketches)

File size: Low MB limit (define threshold)

MIGHT TAKE A ACTION LATER AS PER DISCUSSION WITH BOTH PARTIES.

B. Multi-Project Handling

User can:

- Work on multiple problems/projects

Each project:

- Has separate workspace

C. Task Management System

Editable task list:

- Add / Edit / Delete
- Priority tagging (High / Medium / Low)
- Due dates
- Assigned member

D. Team Collaboration

- Invite via:
 - Gmail
 - Suggested users (internal ecosystem)
- Roles:
 - Owner
 - Contributor

E. Communication System (IMPORTANT CHANGE)

- Replace “Updates” with:
- Message Bar / Chat System
- Must allow:
 - Team communication
 - File references
 - Real-time updates

F. Upload Progress (CRITICAL BUTTON)

- Located at top
- On click:
 - User submits:
 - Progress update
 - Files / notes

Backend Action:

- Updates:
 - Dashboard progress
 - Innovation Score (if applicable)
 - Portfolio

3.4 Patent Support System

Objective:

Enable structured patent filing support

Instead of current UI → NEW FLOW:

Step 1: Questionnaire Page

- Questions like:
 - What is your innovation?
 - Novelty explanation
 - Technical details
 - Market use case
 - Prior art awareness

• Each question:

- Input box (long form)

Step 2: Submission Flow

- On submit:
 - Data sent to:
 - ProMove Admin Panel
 - IPR Expert Team

Step 3: Response Mechanism

- Team connects via:
 - Phone
 - Google Meet

No automated patent filing — only assisted process

3.5 Startup Launch Engine (ENTREPRENEUR FLOW)

UI: Use Figma design as is (MANDATORY)

Modification Required:

Remove: "Apply for III Program"

Replace with: "Launch" Button

Launch Button Flow

On click → Popup:

- Launch to Investors
- Launch to Mentors
- Launch to Both

Backend Logic

Based on selection:

- Display startup in:
 - Investor Dashboard
 - Mentor Dashboard
 - Or both

Display Template (IMPORTANT)

Must include:

- Startup profile
- Founder details
- Pitch deck
- Traction
- Innovation Score

4. INTRAPRENEUR FLOW (MAJOR CHANGE)

4.1 Replace “Innovation Passport” → “Leadership Profile”

Keep:

- Same UI structure from Figma

Modify:

- Highlight:
 - Innovation Score (primary metric)
 - Skills
 - Projects

4.2 Recruiter Launch Feature

Remove: Share button

Add: “Launch to Recruiters”

Flow:

On click:

- Profile pushed to Recruiter Dashboard

Display Template:

- Innovation Score
- Skills
- Projects
- Achievements

5. MARKETPLACE MODULE (ECOSYSTEM DISCOVERY)

Objective:

Enable discovery of:

- Mentors
- Investors
- Recruiters

Display Logic

Profiles must be shown based on:

- Innovation Score
- Activity level
- Relevance

Filters Required

- Domain
- Experience
- Role
- Availability

Interaction (Future Scope)

- Connect
- Request
- View Profile

6. SYSTEM-WIDE CRITICAL RULES

- **Innovation Score must influence:**
 - Visibility
 - Ranking
 - Marketplace exposure
- **No feature should exist:**
 - Without purpose in ecosystem
- **All data must be:**
 - Synced across modules
 - Real-time updated
- **No fake/manual entries:**
 - Everything must be
 - Activity-driven

The showcase result for investor and Hr once the student innovator publishes

(Hr view - same data has to be followed while the student has to use for form filling)

(Investor view - same data has to be followed while the student has to use for form filling)

SCHOOLS

Objective: Streamline the School Dashboard to focus on student performance, compliance, and specific ecosystem connections while removing legacy or external branding elements.

1. UI Deletions (Frontend)

To achieve a leaner, purpose-driven interface, remove the following components:

- **Sidebar Navigation:** Remove the "Innovation Stats" and "Projects" menu items.
- **Hero Section:** Completely remove the "Connected to Atal Innovation Mission" banner (the orange NITI Aayog verification block).
- **Global Project References:** Ensure any "Project" related cards or floating buttons are stripped from the School-view to maintain focus on institutional oversight.

Investors: there should be an investor option in the sidebar. Once clicked, schools would be able to see the investor available so they can reach out to them

2. Navigation & Logic Updates

A. Student Innovators Module (Ranking Logic)

Instead of a generic list, the "Student Innovators" section must now function as a **Leaderboard**:

- **Display:** A serial-wise (1, 2, 3...) list of the school's students.
- **Sorting Logic:** Backend must sort students by their **Innovation Score (0–200)** in descending order.
- **UI Fields:** Rank, Student Name, Current Innovation Score, and "View Journey."

B. Connection Permissions (Access Control)

Strictly enforce the following connection logic for the **School Role**:

- **Authorized Connections:** Students (Internal), Investors (External), and Mentors (External).
- **Restriction:** Explicitly block/hide the **"Recruiter"** marketplace or search functionality from the School Dashboard. Schools oversee growth and funding; Recruiters are reserved for College/Student roles.

3. Feature Addition: Download Compliance Report

The "Policy Compliance Panel" (bottom right of the screenshot) requires a **"Download Full Report"** button. This should generate a clean, professional PDF or structured document.

Compliance Report Template (Simple Structure)

[Header: ProMove Innovation Cloud] Institutional Compliance Report School Name:
[Institutional Name] | Academic Year: 2025-26 Generated on: [Date/Time]

I. Executive Summary

- **Current IIC Star Rating:** 4.2 / 5.0
- **Overall Compliance Status:** ON TRACK (3/6 Milestones Met)

II. Key Performance Indicators (KPIs)

- **Total Student Innovators:** [Number]
- **Innovation Activities Conducted:** [Number]
- **Patents/IPR Filed:** [Number]
- **Total Mentoring Hours:** [Number]

III. Policy Breakdown

Policy Category	Status	Last Updated
IIC Council Formation	Active	Mar 10, 2026
NAAC Innovation Criteria	On Track	Feb 28, 2026
ARIIA Submission	Pending	--
NISP Implementation	Active	Jan 15, 2026

V. Top 5 Student Innovators

1. [Student Name] — [Score]
2. [Student Name] — [Score]
3. [Student Name] — [Score] ...

COLLEGES

1. UI Deletions & Clean-up

- **Remove Navigation Items:** Delete "Innovation Stats" and "Projects" from the sidebar.
- **Remove External Branding:** Completely strip the "Atal Innovation Mission" (NITI Aayog) verification banner.
- **Consistent Cleanup:** Ensure "Projects" is removed from all sub-menus to keep the focus on *Products* and *IPR*.
- **Investors:** there should be an investor option in the sidebar. Once clicked, schools would be able to see the investor available so they can reach out to them.

2. Updated Connection Logic (The "Quad-Link")

The College role is the most connected entity in the ecosystem.

- **Authorized Connections:** Student Innovators, HRs/Recruiters, Investors, and Mentors.
- **Restriction Logic:** Unlike Schools, Colleges must have full visibility into the Recruiter Marketplace to facilitate placements.

3. Event-Driven Sorting

- **Event Creation:** HRs can organize "Industry Connect Sessions" or "Placement Hackathons" within the platform.
- **Auto-Sorting:** Participants in these events are automatically ranked for the HR based on their performance/submission score combined with their base Innovation Score.

4. New Module: Placement Tracker

A dedicated dashboard section for College Admins to monitor the "Product-to-Employee" pipeline.

A dedicated dashboard section for College Admins to monitor the "Product-to-Employee" pipeline.

UI Elements:(ask Rishav)

- **Placement Velocity:** A card showing % of students placed vs. total innovators.
- **Hiring Partners:** A list of active HRs/Companies currently scouting the campus.
- **Status Table:** | Student Name | Innovation Score | Status | Recruiter/Company | | :--- | :--- | :--- | :--- | | Arjun Mehta | 188 | Hired | Tech-Corp Inc. | | Priya Das | 165 | Shortlisted | Seed-Fund VC | | Ishan V. | 140 | In-Progress | Startup-X |

5. College Compliance Report (Enhanced)

The downloadable report for Colleges includes the placement and IPR metrics required for higher education audits (like NAAC/NIRF).

1. UI Deletions & Clean-up

- **Remove Navigation Items:** Delete "Innovation Stats" and "Projects" from the sidebar.
- **Remove External Branding:** Completely strip the "Atal Innovation Mission" (NITI Aayog) verification banner.
- **Consistent Cleanup:** Ensure "Projects" is removed from all sub-menus to keep the focus on *Products* and *IPR*.
- **Investors:** there should be an investor option in the sidebar. Once clicked, schools would be able to see the investor available so they can reach out to them.

2. Updated Connection Logic (The "Quad-Link")

The College role is the most connected entity in the ecosystem.

- **Authorized Connections:** Student Innovators, HRs/Recruiters, Investors, and Mentors.
- **Restriction Logic:** Unlike Schools, Colleges must have full visibility into the Recruiter Marketplace to facilitate placements.

3. Event-Driven Sorting

- **Event Creation:** HRs can organize "Industry Connect Sessions" or "Placement Hackathons" within the platform.
- **Auto-Sorting:** Participants in these events are automatically ranked for the HR based on their performance/submission score combined with their base Innovation Score.

4. New Module: Placement Tracker

A dedicated dashboard section for College Admins to monitor the "Product-to-Employee" pipeline.

A dedicated dashboard section for College Admins to monitor the "Product-to-Employee" pipeline.

UI Elements:(ask Rishav)

- **Placement Velocity:** A card showing % of students placed vs. total innovators.
- **Hiring Partners:** A list of active HRs/Companies currently scouting the campus.
- **Status Table:** | Student Name | Innovation Score | Status | Recruiter/Company | | :--- | :--- | :--- | :--- | | Arjun Mehta | 188 | Hired | Tech-Corp Inc. | | Priya Das | 165 | Shortlisted | Seed-Fund VC | | Ishan V. | 140 | In-Progress | Startup-X |

5. College Compliance Report (Enhanced)

The downloadable report for Colleges includes the placement and IPR metrics required for higher education audits (like NAAC/NIRF).

Report Structure (Simple PDF)

Header: ProMove Innovation Cloud - College Compliance Summary.

Institutional Data: Name, Location, Total Student Count.

Innovation Metrics: Total Patents Filed, MVPs Launched, Total Penny Investments raised by students.

- **Placement Metrics:** * Total HR Connections: [Number]
 - Direct Shortlists this Quarter: [Number]
 - Top Hiring Sector: [Sector Name]

IIC Star Rating: Current Rating (e.g., 4.2/5.0) with contributing activity breakdown.

6. Logic Enforcement

Serial Ranking: The "Student Innovator" list must be strictly serial (1, 2, 3...) based on the dynamic Innovation Score.

No Manual Overrides: Placement status and Innovation Scores must be triggered by platform actions (e.g., an HR clicking "Hired" or a student filing a patent), never manually edited by the College Admin.

Recruiter

1. UI Layout Standardization

Action: Remove the horizontal navigation tabs (Home, Talent Search, College Connect, Active Drives, Onboarding Tracker) from the Center Page Header.

Enforcement: The Sidebar is now the exclusive navigation method. The center page should strictly display the "Recruiter Dashboard" title and the action buttons (Post a Job, Search Talent, Start a Campus Drive).

2. Communication Firewall: "Relevance-Only" Access

The platform is not an open social network. Students are strictly prohibited from "cold-messaging" or reaching out to HRs directly unless the system deems it relevant.

Or a student can email the HRs if an HR has their email uploaded and its shown to 'public' view.

Defining "Relevance" (Backend Logic):

A student can only initiate contact or be visible for contact if one of the following conditions is met:

1. **HR Shortlist:** The HR has explicitly clicked "Shortlist" on the student's Leadership Profile.
2. **Active Application:** The student has applied to an "Active Drive" or "Job Post" created by that specific HR.
3. **Score-Match Invitation:** The student's Innovation Score meets a pre-set threshold defined by the HR for a specific "Talent Search" query.
4. **The "Launch" Trigger:** The student has used the "Launch to Recruiters" feature, which specifically targets HRs looking for their specific skill set/score bracket.

Developer Logic:

- **Disabled State:** The "Message" or "Contact" button on an HR's profile must remain hidden or disabled for students unless a "Relevance Bridge" (Shortlist/Application) is active.
- **System Message:** If a student attempts to bypass this, show a prompt: "You can reach out once you are shortlisted or apply to an active drive."

3. Updated Component View

Element	Status	Action
Top Tabs	Removed	Delete horizontal nav from the center body.
Sidebar	Primary	Ensure all links (College Connect, Active Drives, etc.) are functional.
Messaging API	Restricted	Implement <code>if (shortlisted == true)</code>

4. Visual Cleanup (Reference to Image)

- The "New Matches" and KPI Cards (Open Positions, Shortlisted, Active Drives) should move up to occupy the space vacated by the removed horizontal tabs.
- Ensure the "Post a Job" and "Start a Campus Drive" buttons remain prominent as the primary "Command Center" actions.

INVESTOR

Objective: Evolve the Investor UI into a transactional "Deal Tracker" that supports the Penny Investment model while maintaining strict institutional and student connections.

1. UI Architecture & Navigation Cleanup

Following the standardized UI protocol for the platform:

- **Action:** Remove the redundant horizontal navigation tabs (Deal Flow, Startups, Institutions, My Portfolio) from the center body of the dashboard.
- **Enforcement:** The Sidebar is now the primary navigation anchor. The center header should only display the section title (e.g., "Deal Flow") and the global filters.

2. Startups: The Integrated Marketplace

The "Startups" sidebar link must serve as the primary discovery portal.

- **Source Data:** This marketplace is populated by students who have hit the "Launch to Investors" trigger in their own dashboards.
- **Innovation Score Gating:** Investors can filter startups by the Innovation Score (0–200).
- **Express Interest:** Clicking "Express Interest" (as shown in the image) must trigger a notification to the Student Innovator and create an entry in the Investor's "Deal Flow" tracker.

3. Deal Flow: The Transactional Progress Tracker

The "Deal Flow" section is no longer just a list; it is a linear pipeline representing the investment lifecycle.

Pipeline Stages (Backend Logic):

Every startup the investor engages with must move through these mandatory steps:

Stage 1: Due Diligence (Investor reviews Pitch Deck, MVP sketches, and IPR/Patent status).

Stage 2: Fund Transfer (Initiation of the minimum ₹20,000+ investment).

Stage 3: Stocks/Equity Transfer (Documentation of shares, Director roles, or Co-founder status).

Stage 4: Closed / Portfolio (Startup moves from "Deal Flow" to "My Portfolio").

- **Developer Requirement:** Implement a progress bar for each active deal showing the current stage and "Next Step" required from either the Investor or the Student.

4. Institutions: Direct Funding Module

This section allows investors to engage with the School and College roles directly.

- **Functionality:** Investors browse institutions to provide grants, sponsor innovation labs, or fund specific "Problem Banks" within a school or college.
- **Connection Logic:**
 - Investor → School: Focus on CSR, grants, or foundational lab funding.
 - Investor → College: Focus on early-stage equity, incubation support, and patent commercialization.

5. My Portfolio (Asset Management)

- Keep as is visually, but ensure it tracks the "Investor Role" (Shareholder vs. Director).
- **Real-time Value:** Display the current Innovation Score of the startup team. If the startup's score grows, the "Portfolio Strength" increases accordingly.

Investor Logic Constraints (Guardrails)

- **Penny Investment Threshold:** The system must prevent "Fund Transfer" inputs lower than ₹20,000.
- **Human-in-the-Loop:** While the platform tracks the deal, the "Stock Transfer" and "Patent Verification" stages should require a human admin trigger (as per the Patent Support protocol).

Transparency: Investors must see exactly how a student earned their 0–200 score before they can "Express Interest."

Mentor

Have to build it from scratch and mainly needs to have visibility from what student investors post

Created by
